BAGASSE

Bagasse (n.-buh-gas)

The dry, fibrous residue remaining after the extraction of juice from the crushed stalks of sugar cane.

READILY RENEWABLE NATURAL RESOURCE

Made from crushed stalks of sugarcane, Bagass is 100% bio-degradable and compostable in a landfill environment.

VERSATILE

No plastic or wax lining applied. May be used for hot and cold applications

NO FOSSIL FUELS

A far superior alternative to styrofoam and plastic, both of which are non-bio-degradable, petroleum derived and pollution causing.

RE-PURPOSING AND UPCYCLING

Bagasse processing is a convenient means of usefully clearing voluminous sugar refinery “waste products” that is ordinarily burnt (adding to greenhouse gasses.) The process and purchase of products made from bagasse is true upcycling and an investment in our environment. Upcycling is a component of sustainability in which waste materials are used to provide new products.
