

PRESS RELEASE

April 20, 2009 - Seattle, Washington - RTG CUSTOM SUPPLY, LLC ANNOUNCES INTRODUCTION OF NEXT GENERATION BIO-DEGRADABLE CUTLERY.

NEXT GENERATION SuperDegradable™ Cutlery and Serving Ware for Food Service satisfies an ever increasing demand for more responsible products.

April 20, 2009 - Seattle, Washington - RTG Custom Supply, LLC continues it's commitment to responsible innovation by developing the next generation SuperDegradable™ Cutlery and Serving Ware for the Food Service industry. The new product line is manufactured with a really smart proprietary material that degrades very quickly in an active and inclosed landfill.

It not only degrades quickly - it bio-degrades very quickly.

Randy Bennett, Company spokesperson said: "I am very excited about the completion of this project, and introduction of our new SuperDegradable™ products. This technology is cutting edge. We have developed a product that performs beautifully, and satisfies the booming consumer demand for more responsible products, that are truly degradable in all active and closed landfill operations. End of life management is a thing of the past."

This product provides the Food Service industry with confidence that, even in less than perfect disposal situations, decomposing in a short period of time is a reality.

Improved performance and strong resistance to heat related deformation are product traits customers will appreciate immediately while making the planet healthier one knife, fork or spoon at a time.

RTG Custom Supply, LLC is located in Seattle, Washington and ships products throughout the United States.

About RTG Custom Supply, LLC

RTG develops, manufacturers and distributes environmentally friendly SuperDegradable™ Cutlery and Serving Ware for the Food Service industry. As a pace setter in developing "Next Generation" responsible products, the company continues to be flexible and highly creative within an industry where consumers constantly demand innovation and planet saving technologies.
